

Montana Colors presents:

The REAL evolution

At Montana Colors, we wanted to do a complete overhaul of our most popular product which not only transformed graffiti art all over the world but also the spray paint industry as a whole.

The new Hardcore 2 still maintains its glossy finish and high pressure characteristics but now has a new formulation that offers a much faster drying time and excellent coverage in all colors. We also present the Pop range, ideal for inventing effects and enhancing the rest of the colors.

www.montanacolors.com

High gloss finish

At Montana Colors, we always defend Hardcore's status as the best high-gloss paint available, especially for outdoor graffiti. Now we've reached the correct equilibrium with a smooth and glossy finish which conceals the direction of the outline and offers better resistance to the passing of time. Make sure your photos are taken without flash!

High coverage

The new Hardcore 2 offers better coverage than its predecessor due to a thicker formula which is dense with high quality pigments. The composition of the pigments has been studied, color by color, so as to guarantee the ideal combination for each one. In this way, we managed to create a paint with a uniform coverage with a sufficient density to eliminate drips.

Quick drying

Thanks to a combination of quick solvents and strengthening additives, all of the Montana Colors products are held to a quick drying standard. In just a few seconds, the solvent evaporates leaving an almost instantaneous finish.

?! R&D

Small details are an essential part of innovation, and even more so when dealing with something studied in so much detail as a simple cardboard box or the surface of an aerosol can.

The new box handle helps you comfortably identify the color which it contains.

The new Hardcore is great to both look at and to touch!

★ New colors Coverage level

Full range of colors

With the development of the new formula, we optimized our color range to give better consistency to a color chart which had some structural deficiencies. The new chart is composed of brighter and more attractive colors, each of which guarantee great coverage. Along the way, we've disposed of some of the classic colors, but we're sure that we'll all enjoy the new colors even more!

POP colors

In the same way that there are colors which cover very well, there are others within the Pop range which have extra qualities, that are precious due to their intensity when applied onto a white surface.

And thus the colors of pure pigmentation are born, ideal for innovation and taking your creations to the next level.

Velocity

When talking about spray paint, the concept of velocity always comes into play, whether it be the speed at which it dries, or the speed at which the paint leaves the can. The latter is a very important element because it determines how comfortable the spray is to use. The ideal way is that the paint should adapt to our movements, and not vice versa. Following this premise, the Hardcore 2 offers a continuous flow which adjusts to your movements from start to finish, both with caps for broad outlines and also for finer details.

✓ Perfection

With the Hardcore 2, we managed to eliminate defects in the finish (bubbles, peaks, etc) caused by overlapping layers of paint. In a way, we have achieved perfection in the uniform finish of the final paint film.

Coverage control

With the new Hardcore, we're demonstrating the new Montana Colors coverage scale, a new system which allows us to indicate the grade of coverage of each color on the chart.

The same information will also be available on the 'Donut's, according to the following rating:

- 1/5 Less coverage
- 5/5 Maximum coverage

Cap system

Astro Fat ★★★★★

Needle ★★★★

Guide measurements. The width of the line may vary according to the speed and the distance from the wall.

100% reliability

Weather conditions can significantly affect the performance and behavior of aerosols because the gases which act as propellants for the paint, can also be affected by the temperature of the surrounding environment.

Circumventing this problem has been one of the strong points of the development of Hardcore 2, and we have managed to do so, exceeding all expectations. Without increasing the quantity of ozone harmful gases, we made adjustments so that the aerosol would function correctly in temperatures between 14° and 104°F.

Environment

Throughout time, paint has not just served to decorate and embellish spaces, but also to protect and conserve surfaces. Expanding upon this concept of conservation, **Montana Colors** created and breathed life into the slogan “**Keep the Planet Clean**”, which determines our commitment in all of our actions, from production to distribution, in an effort to impact the environment as little as possible. It’s something which we also demand from our suppliers and pass down to our clients.

This same commitment is what drives us to manufacture our products under the highest and most rigorous standards of quality and respect for the environment. We know this to be true because our control over production is real, it is monitored closely and because it is all performed in our facilities in Barcelona (Spain).

It is our commitment to reach future generations with a planet that is getting better every day.
